Press Release
07 December, 2009

For Immediate Release

REpower and enXco Development Corp. sign agreement for 143.5 MW project in USA

Pune: Germany-based wind turbine maker REpower Systems AG, in which Suzlon Energy Limited through a subsidiary maintains 91% shareholding, announced the signing of a delivery agreement, with limited condition precedent, for up to 143.5 megawatt with the American company enXco - an EDF Energies Nouvelles Company.

The 70 REpower MM92 turbines (each with a rated power of 2.05 megawatts and rotor diameter of 92.5 meters) are intended for a wind farm project in the West Coast market for delivery in mid-2011.

REpower and enXco have already been cooperating in the USA since 2006 and have implemented a series of wind farm projects in the US states of California, Washington and Indiana. All together, REpower USA Corp., headquartered in Denver, Colorado, has installed or sold 390 wind turbines in the USA.

"This agreement is a further sign of confidence by enXco in our reliable technology, which we now can demonstrate with nearly 800 megawatts of installed or sold capacity in the USA", Mr. Per Hornung Pedersen, CEO - REpower, stated after signing the agreement.

"This order reflects our need to secure turbines for the recovering West Coast market where enXco is very well positioned due to the quality of the sites we have secured in California and the Pacific Northwest", stated Mr. Tristan Grimbirt, President & CEO of enXco. "This conditional order demonstrates our continued strength in project development and ability to successfully procure turbines."

Added Mr. Tulsi Tanti, Chairman & Managing Director, Suzlon Energy and Chairman of Supervisory Board of REpower: "We are very pleased with this order. The United States forms one of the most important growth markets for wind energy today, and this order is another step forward in strengthening the REpower presence and competitiveness in the US wind energy market."
